ROS pkg structure¹

- ROS packages tend to follow a common structure
- For python code it will look like this:

```
arlos@cthinkpad:AutSysPKG $ tree
   CMakeLists.txt
         AutSvsPKG
               my ros independent class.py
   package.xml
     – confia
        config AutSysPKG.yaml

    README.md

       launch

    AutSysPKG.launch

    AutSysPKG node

        AutSysPKG ros
               AutSysPKG node.py

    AutSysPKG test.py

   setup.py
```

¹http://wiki.ros.org/Packages

rosbash²

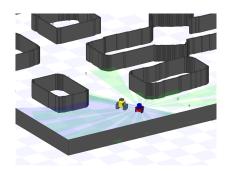

- Offers a set of shell commands for using ros with bash (linux terminal)
- Most popular include:
 - roscd pkg_name (cd to pkg_name easily)
 - rosed pkg_name filename (quickly edit a file)
 - roscat pkg_name filename (quickly visualize a file in terminal)
 - rosrun pkg_name executable (run executable from anywhere without having to give its full path)
- enables tab completion on: roslaunch, rosparam, rosnode, rostopic, rosservice, rosmsg, rossrv, rosbag.

rosrun³

- Part of rosbash suite
- Usage: rosrun pkg_name executable_name
- It will run ONLY executable files
- About files being executable (important!)
 - ▶ make sure your python nodes (i.e. my_python_node.py) are executable
 - ► check by doing: Is -I , if it has an x is executable (i.e. -rwxr-r-)
 - alternatively, if your terminal has colors, the file shows green when doing Is
 - rosrun will also look for your compiled c++ executables (under devel/lib/pkg_name)

Stage simulator⁴

- Simulates a population of mobile robots, sensors and objects in a two-dimensional bitmapped environment
- Stage was designed with multi-agent systems in mind, so it provides fairly simple, computationally cheap models of lots of devices rather than attempting to emulate any device with great fidelity.

rostopic⁵

- Displays information about ROS topics
- Most useful:
- rostopic list (get a list of active topics)
- rostopic info topic_name (get topic type, publishers and subscribers)
- rostopic echo topic_name
- rostopic pub topic_name topic_type msg_press_tab! (publish a topic from console), options:
 - no args (latched)
 - -r float_number (at a certain rate)
 - -once (latch for 3 secs, then dies)
- rostopic hz topic_name (get the publish frequency rate)

roslaunch⁶

- A tool for easily launching multiple ROS nodes
- Implemented with XML syntax (<launch>... </launch>)
- Allows to load parameters to param server
- A launch file can call other launch files
- Launch a node <node pkg="..." type="..." name="..." respawn=true ns="..."/>
- Run syntax: roslaunch pkg_name my_file.launch

parameter server⁷

- Is a shared, multi-variate dictionary that is accessible via network API
- Nodes can use this server to store or retrieve parameters during runtime
- Is not high performance
- Globally viewable
- Usage from terminal: rosparam set param_name param_value, rosparam get param_name
- Usage from python api: rospy.set_param(param_name, param_value), rospy.get_param("param_name")
- Suitable for for static, non-binary data such as configuration parameters

⁷http://wiki.ros.org/Parameter%20Server

Rviz⁸

- 3D visualization tool
- Powerful for topic visualization (useful in debugging)
- Sensoring state information (laser scans, pointclouds, coordinate frames, cameras)
- Can publish some topics (2D pose estimate, 2D nav goal)
- Is recommended to comply with ROS standard topics to enable topic visualization
- Launch using: rosrun rviz rviz (a roscore must be running)
- Not a simulator
